Roles Admin · Coach · Client

Contents

1. New features (highlighted)
2. End-to-end system flow (start → end)
3. Flows by role
4. Demo data & seed script
5. How this PDF was generated

1. New features (highlighted)

These capabilities were added around the **Smart Goal Plan** initiative and full database seeding.

NEW

Smart nutrition & BMR (Coach → Client)

- **BMR & TDEE** — Mifflin–St Jeor BMR from height, weight, date of birth, and gender; TDEE from activity level (Sedentary → Very active).
- **Activity level** — Stored on the client profile; drives TDEE.
- **Auto-fill macros** — One-click suggestion for daily calories, protein, carbs, and fat from goal + weight + TDEE (`lib/bmr.ts`).
- **Carbs & fat (grams)** — Coach can edit and save; client dashboard shows full macro breakdown with protein.
- **Workout recommendation card** — For selected objectives (e.g. weight loss, muscle gain), shows suggested workout *type*, *frequency*, and *intensity*.

Where: Coach → *My Clients* → open a client → profile / nutrition section.

NEW

Client goals are coach/admin only

- Clients **cannot** add or remove their own workout goals via the API or UI.
- Goals page is **view-only** with a short notice; progress updates and “View workouts” remain.

Where: Client → *My Workout Goals*; API `POST /api/client/goals` and `DELETE .../goals/:id` return 403.

NEW

Admin workouts: filter by goal

- Toolbar **Goal** dropdown: all goals, no goal linked, or a specific workout goal.
- API returns each workout’s linked goals for filtering.

Where: Admin → *Workouts*.

NEW**Full relational seed**

- `npm run seed` resets demo data and recreates **all modules** with valid foreign keys: users, profiles, memberships, renewals, equipment, exercises, workouts, media, equipment links, workout goals, goal-workout links, client goals, updates, progress, assignments, schedules, attendance, payments, meal plans, notifications.
- Extra account: `pending@crosca1.local` (INACTIVE client) for admin approval testing.

Warning: Seed clears application tables; use only on dev/local databases.

2. End-to-end system flow (start → end)

Phase A — Entry & authentication

1. User opens the app root `/` → redirect to `/auth/sign-in`.
2. New gym member: *Register as a client* `/auth/register` → submits profile → account is **INACTIVE** until an admin approves.
3. Returning user: email + password → NextAuth session created.
4. After login, redirect by role: **Admin** `/admin/analytics` · **Coach** `/coach/dashboard` · **Client** `/client/dashboard`.

Phase B — Client journey (typical)

5. Client lands on **Dashboard** — membership summary, attendance chart, QR for check-in, coach plan card (when coach + data exist).
6. **Memberships** — choose plan (Basic / Premium). Premium enables coach assignment and coach-managed experience.
7. **Payments** — admin records payment; when status is completed, membership becomes active.
8. With active membership, sidebar unlocks: *Goals, Meal plan, Schedules, Attendance* (plus payments).
9. **Check-in** — show QR on dashboard (or check in from a scheduled session). Coach/admin scans QR or records manual attendance.
10. **Workouts** — follow assigned programs linked to coach-set goals.
11. **Goals** — view assigned goals, progress bars, post progress notes for coach. (*Adding/removing goals: coach/admin only — new.*)
12. **Meal plan** — read-only text from coach.
13. **Schedules / Attendance** — upcoming sessions and history.

Phase C — Coach journey (typical)

14. **My Dashboard** — counts and charts for assigned clients and sessions.
15. **My Clients** — open client drawer: profile, nutrition & smart plan (*BMR, TDEE, auto macros, recommendations — new*), assign catalog goals, meal plan, workouts, log session progress.
16. **Schedules** — create or edit sessions (day/time for clients).

Phase D — Admin journey (typical)

17. **Analytics** — members, active memberships, today's attendance, revenue charts.

18. Accounts — approve/reject registrations; manage users.

19. Memberships — define products; **Client memberships** — sell/assign; **Coach assignments** — link premium clients to coaches.

20. Payments & Renewals — record money movement and expiring memberships.

21. Workout goals & Workouts — catalog goals, link workouts to goals by day; filter workout list by goal (*new*).

22. Schedules & Attendance — facility calendar and check-in monitoring.

23. Equipment — inventory for workouts.

Phase E — Exit

24. Sidebar footer → user menu → **Log out** → session ends → `/auth/sign-in` .

25. Protected routes (`/admin/*` , `/coach/*` , `/client/*`) redirect to sign-in if unauthenticated or wrong role.

3. Flows by role (quick reference)

Role	Primary entry	Main sidebar destinations
Admin	/admin/analytics	Accounts, Schedules, Attendance, Memberships, Client memberships, Coach assignments, Renewals, Payments, Workout goals, Client goals, Workouts, Equipment
Coach	/coach/dashboard	My Clients, Schedules
Client	/client/dashboard	Dashboard, Memberships; if active membership: Goals, Meal plan, Schedules, Attendance; Payments

4. Demo data & seed script

After `npx prisma migrate dev` (or `db push`) and `npx prisma generate` :

```
npm run seed
```

Account	Email	Password	Notes
Admin	<code>admin@croscale.local</code>	<code>admin123</code>	Full admin UI
Coach	<code>coach@croscale.local</code>	<code>coach123</code>	Linked to demo client + meal plan + schedules
Client	<code>client@croscale.local</code>	<code>client123</code>	Premium membership, goals, progress, payments
Pending	<code>pending@croscale.local</code>	<code>client123</code>	INACTIVE — for “approve account” admin flow

5. How to regenerate this PDF

1. Edit `docs/system-flow-and-features.html` if needed.
2. On Windows, from the project root:

```
& "C:\Program Files (x86)\Microsoft\Edge\Application\msedge.exe" `
--headless --disable-gpu --print-to-pdf-no-header `
--print-to-pdf="E:\hernan\gy\gym\docs\system-flow-and-features.pdf" `
"file:///E:/hernan/gy/gym/docs/system-flow-and-features.html"
```

3. Or print from a browser: open the HTML file → Print → Save as PDF.
